

EEB Graduate Seminar, Fall 2016

Theory Under Construction: Building and Critiquing Biological Models

EEB 8990, section 3 (Reg #12123)

Mondays 3–4pm in Ecology 340 L or Q

Theory can help us reason through biological questions and provide rigorous connections between causal processes and observable patterns. This class (a.k.a. ‘theory group’) provides a forum for feedback on ongoing modeling work. Each week is a discussion between the presenter(s) who describe their own work in progress, and everyone else who asks questions and offers suggestions.
